Edge Intensities 2

## General Info

Starting speed: [+1.00e-01 -1.00e-01 0 ] degrees/s.

Total simulation time: 0.11111111111111111 hours

Orbits completed during simulation: 0.0712 orbits.

Hours to detumble: 0.0003 hours.

Orbits to detumble: 0.0002 orbits.

Power consumed to detumble (Total Energy): 0 Jules

Orbital elements: [0, 6828, 9.22e-05, 90, 90, 0]

These define our simulated orbit (see sol\_sim.py in PySOL for more info)

B-dot proportional gain:  $k = 1e-05$

Bang-Bang proportional gain:  $k_p = 90.0$

Bang-Bang derivative gain:  $k_d = 70.0$

Satellite info:

Ferro Magnetorquer:

Number of turns = 1845

Area =  $3.216990877275948e-05 \text{ m}^2$

$k = 1e-05$

Magnetizing factor = 38.3370626305719

Ferro Magnetorquer:

Number of turns = 1845

Area =  $3.216990877275948e-05 \text{ m}^2$

$k = 1e-05$

Magnetizing factor = 38.3370626305719
